EDUCATION

🏠 **Master's — Networking & Cloud 2020 — 2022**
Politecnico di Torino
🏠 **Erasmus+ — UPC Barcelona 2021 — 2022**
Universitat Politècnica de Catalunya
🏠 **Bachelor's — Computer Eng. & Electronics 2016 — 2019**
University of Perugia

Profile

Full-stack software engineer with four years across fintech, travel technology, DevOps, and AI-enabled products. I ship end-to-end—React and React Native frontends, Node.js APIs, Terraform, Kubernetes, and GitOps on Azure—and embed AI through RAG pipelines, LLM integrations, and MCP servers. Comfortable as tech lead or individual contributor.

Core skills

📄 Full-stack · 4 years

TypeScript, Node.js, React, React Native, Next.js, Express, Gin, Fastify, Flask, MongoDB

🛠️ DevOps · 2 years

Terraform, ArgoCD, Docker, GitOps, Kubernetes, Azure, DigitalOcean, OpenSearch, Heroku

🧠 AI engineering · 2 years

RAG, LangChain, MCP, Claude, Cursor, LLM orchestration, embeddings, vector storage

📁 Experience

• Fullstack Tech Lead — Paage

UGC link-in-bio platform with restaurant-SaaS and in-page commerce; ~40% technical leadership, 60% hands-on delivery.

- Led the engineering team end-to-end—owning architecture, code review, and roadmap—while shipping core product features myself.
- Cut P99 page load from 17s to 3s via fetch refactoring, API query tuning, caching, and targeted React rendering optimisations.
- Designed and built a production intelligence pipeline (scraping, RAG, LLMs, clustering) powering personalisation and programmatic SEO.

📍 Paris 📅 Feb 2026 — May 2026

• Software Engineer — Feefy

Structured-products fintech platform (React, Next.js, Node.js) used by asset managers and private banks.

- Integrated enterprise data provider Harvest for real-time portfolio and quotation synchronisation across the platform.
- Designed and shipped a RAG-based automated booking flow, wired end-to-end with the backend and structured-products workflow.
- Open source: extended the **DigitalOcean Terraform provider** with OpenSearch support on `log_destination` (#1200).

📍 Paris 📅 May 2024 — Feb 2026

• DevOps Engineer — Amadeus

Internal developer-platform and deployment tooling for travel-tech services at global scale.

- Built hybrid CI/CD pipelines from development to Azure and on-premise, with Terraform provisioning cloud resources and bare-metal nodes.
- Developed an internal Container Deployment Manager orchestrating 150+ services (Kubernetes, Helm, ArgoCD, React, Python).
- Drove GitOps adoption and self-service deployment workflows, reducing manual release toil across multiple internal teams.

📍 Nice 📅 Jan 2023 — May 2024

• Freelance — Labelprint & — Info.Tel / Gesca

Mobile, web, and ERP-integration engagements for Italian clients around the Gesca ERP.

- **Labelprint:** B2B label-ordering app (Expo/React Native, Node/Express/Prisma, SQL Server) integrated end-to-end with the Gesca ERP.
- **Info.Tel:** Gesca ERP modernisation—Go/Gin API, Next.js site, and React Native field apps for on-site operators.
- Built an MCP server exposing live ERP tools to LLM agents, secured with OAuth 2.1 and API keys.

📅 2024 — ongoing

• Software Engineer & Solidity — Fragsy

Web3 community-engagement platform with on-chain rewards and collectibles.

- Deployed production smart contracts and NFT minting flows integrated with community engagement tooling.
- Built the dApp frontend integrations (wallet connect, on-chain interactions) and supported launch operations.

📅 Aug 2022 — Oct 2023
